

Estate<sup>®</sup>WIRE 

Stronger. Longer Lasting.

Fencing for Deer 

# EstateWIRE® FX

EstateWIRE® FX combines 2Life® anti-corrosive technology with the rigid, strength forming advantages of the FX knot to deliver a stronger, longer lasting deer fence.

We have been making longer lasting fencing for more than 30 years. Like our fencing products, we are here to stay.

GUARANTEED 2Life® anti-corrosive technology PLUS the rigid, strength forming FX knot deliver a strong and robust deer fence that will stand the test of time.

## EstateWIRE® FX is:

- Animal hide, skin and coat friendly reducing the risk of injury to livestock and people
- Stronger than traditional hinge joint fence
- More rigid than conventional hinge joint fencing
- More rigid in the horizontal fence line
- Faster and easier to install
- Manufactured to BS EN10223-5
- Galvanised to BS EN10244-2
- Guaranteed to last at least twice as long as zinc only galvanised products to BS EN10244-2 Class A.

## Rapid tying off

EstateWIRE FX is manufactured using continuous horizontal and vertical wires. The horizontal and vertical wires are held together at their cross over point by individual FX knots.

Removing the FX knots along a vertical wire allows the vertical wire to be removed quickly creating the horizontal tail wires for tying off.

Unlimited applications due to a comprehensive number of mesh apertures.

Our standard stock EstateWIRE FX products:

**HT13/190/15**

Characteristics

- > Height  
1905mm
- > Vertical Spacing  
150mm
- > Length  
100m
- > Nominal Weight  
109kg
- > Rolls/pallet  
9

**HT13/190/22**

Characteristics

- > Height  
1905mm
- > Vertical Spacing  
225mm
- > Length  
100m
- > Nominal Weight  
91kg
- > Rolls/pallet  
9

Bespoke specifications can be manufactured on request.

EstateWIRE FX is suitable for infrastructure rail & road projects and solar energy farms. Roll lengths available up to 500m for agriculture/highway/rail infrastructure projects where specialist fencing installation equipment is used.
